Avoid Pollution

Pollution of the environment is a serious problem of industrialized societies. Industrial development and the green revolution have had a negative impact on the environment. Serious degradation and depletion have been caused due to overuse, abuse and mismanagement of resources to meet human greed. Environmental pollution is defined as the adverse alteration of our environment. These changes - could be in the physical, chemical or biological characteristics of air or water that are harmful to human life and other living things. Population explosion, rapid industrialization, deforestation, unplanned urbanization, scientific and technological advancement, etc. About 35% of India's total area is seriously polluted. There is a shortage of drinking water. Cities and cities are full of smoke, smoke, dust, gas, smell and noise. Nuclear explosions and nuclear tests also pollute the air.

Water pollution changes the quality of the water. This disrupts the balance of the polluted by the ecosystem and poses health risks.

Human and human-created machines are of - contaminants. To put it another way, pollution is - wreaking havoc on Mother Earth, and we, as humans, must do everything we can to prevent it. Pollution - prevention is critical because it protects the environment by conserving and protecting natural resources while also boosting economic growth by allowing industry to be handled by households, businesses and - communities.
